

**May 13 Scale Aerotow — Report by Jim Gibson**

Last Saturday was our first aerotow of the season at the Molalla RC Association field in Molalla, OR. We had hot weather (for Oregon) with a forecast high of 92 degrees as well as the east wind picking up in the afternoon. We were able to get started early and everyone was satisfied by noon with the amount of flying they got in. The towing was done by Martin with his recently completed Hangar 9 Carbon Cub FX-3 sporting a DLE-222 up front. Our club finally has a tug with capability to tow everything that club members bring out to the field. It's a great tug and we're lucky to have it available for towing.

Yes, a 50% KA6 will fit in a Tesla
